

Qondoc Infrastructure

Qondoc Infrastructure makes it easy to navigate the company's complex IT infrastructure while at the same time providing detailed data about all hardware and software. Documentation, inventory and visualisation in one go.

Manage large data volumes

Qondoc Infrastructure is a graphic visualisation tool for automated documentation of complex IT infrastructures. The program allows you to document all objects within your network environment while at the same time adding value by letting you manage and control large volumes of data collected through the automated inventory function.

An overview of the entire network

Qondoc Infrastructure shows you the relationships and connections between documented objects, which makes it easy to obtain an unprecedented overview of the network. Qondoc Infrastructure also includes administrative functions for e.g. internal debiting, budgeting and contract management. The tool provides simple and comprehensible reports on the programs and databases installed plus information on hardware and software on server and clients.

Qondoc Infrastructure provides

- Form-based object documentation
- Graphic visualisation of object locations and relationships
- Hierarchical structures for physical location and organisations
- Document storage in the database for coupling to documented objects
- Account structures for internal debiting purposes
- Contract management with notification
- Dynamic IP address structure
- VLAN documentation
- License registration of programs installed
- Detailed information on hardware and software for systems based on Windows, Unix and Linux
- Detailed information on SNMP based network objects
- Advanced search and report options.

QONDOC ALL-IN-ONE is like a hub where all your IT information is gathered together. By using the same tool throughout the whole organisation, you improve communication and interaction between different functions such as infrastructure management, application management and service support and delivery. Each person gets the information they need for making decisions.

Which functions do you need?

- INFRASTRUCTURE MANAGEMENT
- APPLICATION MANAGEMENT
- SOFTWARE ASSET MANAGEMENT
- CONTRACT MANAGEMENT
- FINANCE MANAGEMENT
- ALARM MANAGEMENT

Plus:

- Integration with Active Directory and Novell Directory Services
- Integration with supplier-specific management products
- Support of background graphics for easy navigation
- Web-based reporting system

A complete solution meeting tomorrow's requirements:

- Qondoc Infrastructure is a complete solution which continues to build on the standards of – and adds value to – the various existing expert systems in your organisation
- A modular and scalable solution
- A solution with graphic visualisation and navigation functionality
- A solution which addresses the current and future requirements for security and standardisation and the introduction of process-oriented approaches (ITIL, ISO, SOX, FDA, and BITS).
